Computer Science ~ Final Part II	McLees/Mendreski

Computer Science 1 Final – Part II

Due: January 18, 2017 at the beginning of the period

A furniture manufacturer makes two types of furniture; chairs and sofas. The file PRICE&TAXDATA.TXT contains three numbers giving the cost per chair, cost per sofa, and sales tax rate. Write a program to create an invoice form for an order. See Figure 4.14. After the data on the left side of Figure 4.14 are entered, you can display an invoice in a list box by pressing the Process Order button. You can press the Clear Order Form button to clear all text boxes and the list box, and you can press the Quit button to exit the program. The invoice number consists of the capitalized first two letters of the customer's last name, followed by the last four digits of the zip code. The customer name is input with the last name first, followed by a comma, a space, and the first name. However, the name is displayed in the invoice in the proper order. The generation of the invoice number and the reorder of the first and last names should be carried out in Function procedures.

Furniture Order Form Customer name: Smith, William Invoice Number: SM4501 (Last, First) Address: 123 Geary Street Name: William Smith Address: 123 Geary Street City, State, Zip: Alameda, CA 94501 City: Alameda, CA 94501 Number of Number of Chairs: 4 chairs ordered: Number of Sofas: 3 Number of sofas ordered: Cost: \$4,175.00 Sales Tax: \$208.75 Total Cost: \$4,383.75
