

Phishing and email protection Via CyberNut - Tech Tip Tuesday

3/19/24

Good Morning CSH

We are well underway with our CyberNut phishing and email protection program. Please share the information you learn with CyberNut to family and friends to help them stay safe on the internet.

Below are two resources to help describe the Cybernut program and how it will help you and anyone you share the information with (family, friends, etc.)

- An introduction to the program from the founder of CyberNut, Oliver - [LINK to intro](#). This introduction includes a short video on how the CyberNut operates and how you can pin the CyberNut reporting app to the toolbar in Outlook.
- [A PDF](#) on how to report a suspicious email or for an email that you clicked and later realized was spam. We use this information to keep us all safe and learn, not to get anyone in trouble for clicking.
- \*\*\* To pin the CyberNut app to the toolbar, open any email >> Click the three dots located at the top right corner of the screen " ... " >> Click "Customize Actions" >> Select CyberNut" >> Click Save.

The CyberNut reporting tool will now be pinned to your email tool bar, for easy access.

Thank you
